

# Project Design Phase-II

## Data Flow Diagram & User Stories

Date: 15-07-2026

Team ID: **23BFA05428**

Project Name: **Smart Library Request Workflow in ServiceNow**

Maximum Marks: 4 Marks

**Workflow:** Student logs in → Searches Book → Submits Request → Availability Validation → Librarian Approval → Inventory Update → Notification → Reports. This workflow minimizes manual intervention and ensures accurate tracking of all library transactions.

**Workflow:** Student logs in → Searches Book → Submits Request → Availability Validation → Librarian Approval → Inventory Update → Notification → Reports. This workflow minimizes manual intervention and ensures accurate tracking of all library transactions.

**Workflow:** Student logs in → Searches Book → Submits Request → Availability Validation → Librarian Approval → Inventory Update → Notification → Reports. This workflow minimizes manual intervention and ensures accurate tracking of all library transactions.

| User          | Story            | Acceptance Criteria |
|---------------|------------------|---------------------|
| Student       | Request a book   | Request created     |
| Student       | Track request    | Status visible      |
| Librarian     | Approve requests | Approval updated    |
| Librarian     | Manage inventory | Stock updated       |
| Administrator | View reports     | Analytics available |

# Project Design Phase-II

## Detailed User Stories

Date: 15-07-2026

Team ID: **23BFA05428**

Project Name: **Smart Library Request Workflow in ServiceNow**

Maximum Marks: 4 Marks

**US-1:** The workflow supports role-based interactions ensuring students, librarians, and administrators perform only authorized actions. Automated notifications, inventory synchronization, and request history improve transparency and operational efficiency across the library management process.

**US-2:** The workflow supports role-based interactions ensuring students, librarians, and administrators perform only authorized actions. Automated notifications, inventory synchronization, and request history improve transparency and operational efficiency across the library management process.

**US-3:** The workflow supports role-based interactions ensuring students, librarians, and administrators perform only authorized actions. Automated notifications, inventory synchronization, and request history improve transparency and operational efficiency across the library management process.

**US-4:** The workflow supports role-based interactions ensuring students, librarians, and administrators perform only authorized actions. Automated notifications, inventory synchronization, and request history improve transparency and operational efficiency across the library management process.

**US-5:** The workflow supports role-based interactions ensuring students, librarians, and administrators perform only authorized actions. Automated notifications, inventory synchronization, and request history improve transparency and operational efficiency across the library management process.

**US-6:** The workflow supports role-based interactions ensuring students, librarians, and administrators perform only authorized actions. Automated notifications, inventory synchronization, and request history improve transparency and operational efficiency across the library management process.

**US-7:** The workflow supports role-based interactions ensuring students, librarians, and administrators perform only authorized actions. Automated notifications, inventory synchronization, and request history improve transparency and operational efficiency across the library management process.
