

Project Design Phase

Problem – Solution Fit

Date	15-07-2026
Team ID	23BFA05428
Project Name	Smart Library Request Workflow in ServiceNow
Maximum Marks	2 Marks

Solution Fit:

The Smart Library Request Workflow, developed on the ServiceNow platform, provides a digital, role-based solution to the challenges of traditional, manual library management in academic institutions. Students can search the catalogue, raise book requests, and track request status through a self-service Service Portal, while librarians manage the book inventory and control the approval process using role-based access, ensuring requests are reviewed securely and efficiently.

Automated workflows handle request processing and real-time availability updates, so that on approval the system updates stock records and notifies the requester without any manual intervention. Reporting and dashboard features give librarians insights into borrowing trends and pending or overdue requests, improving visibility, efficiency, and accuracy in managing library resources across the institution.

Problem – Solution Fit Canvas:

1. CUSTOMER SEGMENTS [CS] - Undergraduate & PG students - Research scholars - Faculty members (view-only) - Librarians / library staff	2. JOBS-TO-BE-DONE / PROBLEMS [J&P] - Request a book remotely - Track request status in real time - Know current book availability - Avoid repeated visits to library counter	3. TRIGGERS [TR] - Need material for exams/assignments - Desired book unavailable on shelf - Course/faculty recommended reading - Semester reading list release
4. BEFORE / AFTER STATE [TR & EM] - Before: manual registers, long queues, no status visibility - After: quick online request, transparent approval, timely updates	5. AVAILABLE SOLUTIONS [AS] - Physical request slips - Phone / in-person requests to librarian - Manual Excel-based inventory - Limitation: slow, error-prone, no tracking	6. CUSTOMER CONSTRAINTS [CC] - Limited library working hours - Manual, paper-based request process - Delay in approval and stock updates - No visibility into real-time availability
7. BEHAVIOUR [BE] - Prefer self-service digital requests - Expect instant status notifications - Comfortable using web/mobile portals - Want quick turnaround on approvals	8. CHANNELS OF BEHAVIOUR [CH] - Online: Service Portal, mobile browser, email - Offline: library counter, notice board	9. PROBLEM ROOT CAUSE [RC] - No centralized digital request system - Manual inventory tracking - Absence of automated approval workflow - No real-time synchronization of stock data
10. YOUR SOLUTION [SL] - Online book request & catalogue search via Service Catalog - Role-based access: student requester and librarian approver - Automated approval workflow with real-time inventory validation - Automated notifications and dashboards on borrowing trends
