

Project Design Phase

Proposed Solution Template

Date	15-07-2026
Team ID	23BFA05428
Project Name	Smart Library Request Workflow in ServiceNow
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Traditional library management in academic institutions relies on manual registers, in-person visits, and paper-based approvals, resulting in delays, lack of transparency in book availability, and inefficient handling of requests. There is a need to automate and streamline library operations for a faster, more transparent process.
2.	Idea / Solution description	Develop a role-based Library Management System on the ServiceNow platform that enables students to search the catalogue, raise book requests through the Service Catalog, and track request status, while librarians manage the book inventory, approve or reject requests through automated workflows, and monitor borrowing trends via dashboards and reports.
3.	Novelty / Uniqueness	The solution combines role-based access control, Service Catalog-driven requests, automated approval workflows, real-time inventory validation, automatic notifications, and borrowing-trend analytics within a single ServiceNow platform, delivering an end-to-end digital library management solution without dependence on manual processes.
4.	Social Impact / Customer Satisfaction	Reduces waiting time and dependence on physical library counters, increases transparency of book availability, promotes self-service digital requests, and ensures timely access to study material — improving academic outcomes and overall satisfaction for students and librarians alike.
5.	Business Model (Revenue Model)	Revenue can be generated through institutional licensing and subscription of the ServiceNow platform. Additional streams include fine management for overdue books, premium reservation services for high-demand titles, and integration with paid digital library and e-book resources.
6.	Scalability of the Solution	Being built on the ServiceNow cloud platform, the solution can easily scale to additional departments and campus libraries, e-book catalogues, and future enhancements such as a mobile application, consortium-level library sharing, and integration with Learning Management Systems.
